- Back-End: NodeJs - Sequelize - MongoDB - Express.Js - PostgreSQL -
- Front-End: React - Redux - NextUI
- Metodologías Ágiles: Scrum - GitHub

ABOUT ME

I am a systems student at ORT with experience in software development. I previously worked at Obux before taking on the challenge of becoming a full-stack developer through an intensive program at Plataforma 5, which consisted of over 800 hours, I acquired skills in key technologies such as MongoDB, Express.js, React.js, and Node.js, while also using agile methodologies like Scrum and engaging in pair programming. My experience at Obux and my training in the Bootcamp have provided me with a solid foundation for full-stack development.

I am now actively seeking a position in the IT sector at a company that values teamwork and, above all, professional growth.

WORK EXPERIENCE

Front & Back End Developer
Obux, February 2021 - Mayo 2023

- Application Development: Design and development of web and mobile applications using technologies such as MongoDB, Express.js, React.js, and Node.js.
- Client Interaction: Active and effective communication with clients to understand their requirements, gather feedback, and ensure their needs are integrated into product development.
- Team Collaboration: Close collaboration with other team members, participation in planning meetings, code reviews, and support in development activities.
- Maintenance and Optimization: Continuous maintenance of existing applications and problem-solving.
